

Method for Marking Lines During Cable Tray Fabrication

Overview

Watch how a skilled fabricator professionally marks a cable tray before cutting it with a grinder, ensuring accuracy, safety, and a clean final finish. This video shows the step-by-step preparation process used in fabrication sites, workshops, and industrial construction projects. These trays are typically made of stainless steel, aluminum, or galvanized iron, all of which require permanent labeling for identification, traceability, and . , is a welded wire-mesh cable management system made of high-strength steel wire. The selection of material and finish is a function of the environment in which it is used, in a wide range. Organization: They help organize cables neatly, preventing tangling or damage. Easy Maintenance: With cables clearly laid out and supported, repairs or replacements become much easier. Cable Tray Systems must provide protection to life & property against fire. The purpose of this article is to define the sequence and methodology for the installation of electrical cable trays, cable trunking, cable raceways and boxes, junction and pull boxes.
