

Monitor output of the head unit

Overview

Automotive displays — which include the center display, heads-up display (HUD), and gauge instrument cluster — show key information and interactive content to the driver. The center information display is connected to the head unit, and provides navigation and other in-cabin. The flagship Pioneer and Kenwood head unit models can do rear zone but only output composite video, which is generally good enough for the application. But there are pitfalls such as not being able to do Android Auto and play a video file off USB simultaneously. Video has to be played from DVD. I have installed a chinese Pumpkin Android head unit in my Toyota Previa van and after adding an external 3G router and connecting it via an ethernet adapter and an car roof antenna I am now extremely pleased. The controller integrates functions of the traditional head unit, cluster and. An automotive head unit, sometimes called the infotainment system, is a vehicle audio component providing a unified hardware interface for the system, including screens, buttons and system controls for numerous integrated information and entertainment functions. Audio sound Share in Headrest monitor in MTK Android C.
