

Netherlands Aggregator Switch 800G

Overview

The Accton AS9817-640 is an 800G high-performance switch platform for modern data center applications. The switch provides line-rate L2 and L3 switching across the 64 x 800 GbE OSFP800 ports, each supporting 2 x 400 GbE, 4 x 200 GbE, or 8 x 100 GbE via breakout cables. Leveraging the advanced Qumran3D platform, it delivers exceptional forwarding scale, power efficiency, and feature richness to address the rapidly evolving demands of carrier-grade backbone. NL-ix is readying itself for another 100% increase in traffic and 800G will play an important part in this. It is the more economic and more sustainable choice, and we believe it will be the standard for big content networks, international clouds and larger ISPs. Equipped with BCM15K TCAM, the switch can be deployed either as a top-of-rack switch in a data center, or as a carrier access/aggregation. Cisco N9364E-SG2 switches are 64-port 800G fixed switches.
