

Network connection lost after unplugging and replugging the optical module

Overview

Check the model of the faulty optical module. If it is not a Huawei-certified optical module, replace it with a Huawei-certified optical module. If the optical module is installed on a GE port, run the display interface `GigabitEthernet x/x/x` command to view port information when the optical module. Common Problems Encountered in Optical Module Applications In real-world deployments, It failures generally fall into several key categories. Most issues are not isolated but result from compatibility, environment, or improper operation. In. The issue is a few times a day I lose Internet connection! When I check the LEDs on the ONT box all seem fine but the router has no Internet, the router and WiFi connection is fine its just there is no Internet connection coming from the ONT, as if something happens and it drops the connection. Have you ever dealt with sudden network drops from faulty optical modules?

Issues like this cannot only break communications, but they can really jeopardize business continuity.
