

New Zealand 1 6T Optical Router

Overview

Each module integrates eight electrical and eight optical channels operating at 212.5 Gbps PAM4 per lane for an aggregate data rate of 1.6T. With integrated DSP and silicon photonics (SiPh) technology, it provides excellent signal integrity and reach up to 500 meters over. This article explains how this new 1.6T optical modules are, the major module types involved, and the application scenarios driving adoption. 6T optical module designed for next-generation data center. WL6e provides the efficient transport of 400G-800G connectivity required for network evolution and the step-level improvement in economics to justify the effort of new technology adoption, all in a design that allows for simple adoption in existing network assets. Coherent technology evolution has. Lumentum's 1.6T transceivers firmware supports CMIS 5. These devices are used with EML lasers, Silicon Photonics and long wavelength Photodetectors.
