

ONU New Fiber Optic Switch

Overview

A GPON optical network unit with a 2.5 Gbps downlink speeds at distances up to 20 km. An ONU is a terminal device in a fiber-to-the-home (FTTH) network. The ONU is responsible for: ONUs operate at Layer 1 and Layer 2 (physical and. ONU stands for Optical Network Unit. In simple terms, it's a device that receives the optical signal from your Internet Service Provider (ISP) via a fiber optic cable and converts it into electrical signals that your router, computer, phone, and other devices can understand and use. Think of it as a sophisticated translator, turning the "language of. This article compares the top ONU models in 2025, analyzing their features, performance, and use cases to help users make an informed decision. Knowing these roles helps you pick the right device for your needs. It changes light signals into electrical signals.
