

OPGW optical cable allowable bending radius

Overview

During installation and splicing, the minimum allowable bending radius should be about $20D$. It is recommended to use pulleys with diameters of 600mm and 800mm to ensure no damage to the cable. Please review the document (WI-0298 Rev 1) before proceeding with installation. The width of the pulley groove should not be less than the diameter of the cable and should be as large as. Before laying the cable, make certain that the entire team doing the laying is familiar with the cable parameters, the handling required, the minimum bending radii, and the maximum cable pulling force. Therefore, specific components and machinery are used for the OPGW cable: pullers, tensioners, anti-twisting counterweights. or request. Optical unit composed by 1 to 3 stranded stainless steel tubes Double or triple armour layers available on request.
