

Oltpn port for fiber optic cable connection

Overview

The 1 G ports use LC connectors for fiber-optic connections and RJ-45 connectors for copper connections. The SFP slots support only SFP+ modules. A fiber optic connector is a mechanical device used to align and join optical fibers, enabling light to pass through with minimal loss. Unlike fiber splicing, which is permanent, connectors allow for easy connection and disconnection of cables, making them ideal for maintenance and flexibility in. The OLT communicates with the optical network unit (ONU) or optical network terminal (ONT) at the user end, coordinating the distribution of data and ensuring that each connected user receives the appropriate information. Equipment Components Generally speaking, OLT equipment includes a rack. Gigabit Passive Optical Network ports support up to 128 clients on each port. RJ45 serial console port for Command Line Interface (CLI) management.
