

Optical module chip shipments

Overview

BOSTON (January 7, 2025) – Total shipments of leading-edge datacom optical modules are projected to tally over \$9 billion for 2024, according to the latest Optical Components Report from research firm Cignal AI. Optical module chips are semiconductor devices that enable high-speed data transmission in fiber optic networks. While chip rankings differ by segment (100G, coherent modules, or silicon photonics), reviewing supplier rankings. Optical Module Chip by Application (10/25G Optical Mould, 100G Optical Mould, 200G Optical Mould, 400G Optical Mould, 800G Optical Mould), by Types (Laser & Detector Chip, Amplifiers, Drivers and MUX/DEMUX Chip), by North America (United States, Canada, Mexico), by South America (Brazil. The global optical modules market was valued at \$14. 8 billion in 2025 and is projected to reach \$39. 5% during the forecast period from 2026 to 2034. Hyperscale data centers now account for over 60% of optical component demand, with cloud services and AI workloads pushing higher-speed modules.
