

Ordinary magnets in distribution boxes

Overview

Using magnets in rigid box designs offers a mix of convenience and style. They enhance user experience through easy opening and closing, while elevating your product's visual appeal. Magnet deliveries are usually undertaken post magnetization, a process where their formidable magnetic properties become more pronounced. The first step involves wrapping. Which magnets are used in packaging applications?

Have you already found that now many packaging products have been used in magnetic switches, such as high-end gift boxes, flip-top boxes, wine boxes, mooncake boxes, cosmetic boxes and display packaging, today we will introduce the magnets applied. Spacers should be at least $\frac{1}{2}$ of the magnet thickness. Material should be non magnetic and non abrasive. For production size quantities, a custom molded design will prevent slippage during transport and help provide for safer unpacking. However, weak magnets may lead to security issues, and higher costs can impact your budget. It's not entirely clear whether the length of time a magnet goes unused – like when.
