

Percko Active Optical Cable

Overview

Our active optical cables are designed for the transmission of HDMI or DisplayPort signals with a resolution of up to 8K or USB or Ethernet signals with a data rate of up to 10 Gbps. There are various connection solutions available for switching networks, such as optical modules + optical fibers, Active Optical Cables (AOC), and Direct Attach Cables (DAC). DAC can be further categorized into active ACC, AEC, and passive DAC. So, what exactly are these solutions and how do they. Molex Active Optical Cables (AOCs) achieve high data rates over long reaches, using a fraction of the power of other brands while providing streamlined installation for high-performance computing and storage applications. Indeed, they have optical fibers which "connect" the plugs.
