

Poor fiber return loss and insertion loss

Overview

Insertion loss tells you how much signal arrives at the receiver; return loss tells you how much signal bounces backward toward the transmitter. They represent distinct aspects of signal transmission and differ for both media types. Here we explain the key differences between these two parameters, why. In the test report for a fiber cable, you may often see some data related to fiber insertion loss (IL) and return loss (RL), but do you know what insertion loss and return loss actually mean?

How do the values of IL and RL impact the quality of the fiber cable?

Are higher values better, or lower. Insertion Loss (IL) is the amount of optical power lost as the signal travels from one point to another in a fiber optic link, usually across connectors or splices. Formula for. Ever connected a fiber optic cable only to find your signal dropping like a bad cell call in a basement?

You're not alone—poor fiber performance metrics like insertion loss and return loss plague even seasoned network pros, costing time, money, and sanity.

Understanding Optical Loss in Fiber Networks

Insertion loss and return loss can impact fiber network performance - this post explains what they are and gives five tips to reduce their impact.

Nov 08, 2025

What is Return Loss and Insertion Loss

Insertion loss is mainly to measure the resulting signal value when the optical link encounters loss, and return loss is to measure the loss of the reflected signal when the optical link encounters component

Feb 04, 2026

What is Insertion Loss?

Insertion loss and return loss are two important data to evaluate the quality of many passive fiber optic components, such as fiber optic patch cords and fiber optic connectors, etc.

Apr 01, 2026

Insertion Loss and Return Loss Basics for Reliable Signal Performance

Insertion loss vs return loss explained: understand their impact on signal quality, how to measure them, and why both matter for reliable network performance.

Dec 14, 2025

What Causes Poor Insertion Loss and Return Loss?

Evidently, fiber end-face defects like scratches, pits, cracks, and particle contamination will have a direct impact on the performance, contributing

Oct 20, 2025

Reference to Insertion Loss and Return Loss for Fiber

Evidently, fiber end-face defects like scratches, pits, cracks, and particle contamination will have a direct impact on the performance, contributing

Dec 06, 2025

Return Loss: Causes and Testing Procedures

Poor return loss performance can ultimately cause a fiber link to fail insertion loss and not pass certification testing. In addition, there are some
