

Risk Collection for Optical Cable Plants

Overview

Four types of risks are documented by the INRS and the standards IEC 60825. These include micro-silica fragments, exposure to active lasers, inhalation of glass particles, and chemical exposure to coatings. This guide details each of these hazards, along with concrete preventative measures. Employees or Subcontractors open and/or splice Optical Fibre Cabling. Upload the following documents to your risk review: 1. SWMS / JSA / JHA (procedure) for working with optical fibre cabling, SIGNED by you/your. Without proper care, handling optical fibers can result in physical injuries from shards, or optical damage from laser light exposure. Proactive steps towards optic safety can significantly reduce the incidence of these hazards and ensure the integrity and longevity of the fiber optic. alternative pedestrian routes if work area ectly remove chamber cover in accordance with required standard (SA002) Contain open chamber, chamber cover & equipment within seg r, perform water test to determine category e. If volume is <5m³ & is not deemed as polluted then. Risk management is the process of identifying, assessing and controlling potential threats that could jeopardize an organization's operational efficiency, financial stability and compliance with regulatory standards. Good practices begin with recognizing the real risks. Fiber optic cable is not as dangerous as a live cable. There is no risk of electrocution, no magnetic field, no radio waves.
