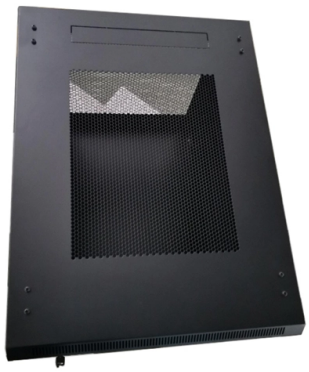
ST Adapter High Precision and Bandwidth Performance Comparison



Overview

The devices offer an 8MHz gain-bandwidth, 5V/µs slew rate, and low input noise of 11nV/√Hz, supporting improved frequency response and reduced distortion. This makes them suitable for amplifying signals from transducers, bridges, and strain gauges, as well as for use in. The ST precision operational amplifier portfolio includes several series covering different voltage ranges as well as multiple combinations of power consumption and gain bandwidth, allowing customers to get the best performance for the appropriate accuracy. ST's low precision op amp solutions. ST's product portfolio includes operational amplifiers and comparators dedicated to the challenging industrial, automotive and consumer markets. The TSX. Essentially I am looking for the highest performance accelerometer (regarding noise) in the STM portfolio. The sensor requirements are: ~±2g scale support, I2C support (preferred), FIFO buffer, at least 1 (absolute) threshold interrupt. I am currently using the LSM303AGR in my design, which I am.
