

South African OSFP optical module LPO

Overview

6T OSFP 2×DR4 Linear-drive Pluggable Optics transceiver modules are designed for use in 1.6T Ethernet links on up to 500m of single mode fiber. Forward error correction (FEC) is required to be implemented by the host in order to ensure reliable system operation. The idea is simple: instead of a DSP (digital signal processor) inside the module – replacing it with transimpedance amplifier (TIA) and a driver chip with high linearity and EQ capability – LPO shifts signal processing into. An LPO (Linear Pluggable Optics) solution offers considerable power savings for optical interconnect by removing the digital signal processing (DSP) function from the pluggable optical module. This architecture takes advantage of the capabilities in each segment of the link to form a power, cost. OP13LI8-005D 1. They are compliant. The following analysis dives into the technology behind OSFP optics, performance evolution across speed classes, deployment considerations, and how LINK-PP, as a full-stack optical module manufacturer, supports high-density interconnects with complete optical, electrical, and mechanical. Data Recovery (CDR) in the system. Some of the key proponents of LPO in the industry are Macom, Semtech and Maxlinear. The OSFP Management interface is described in a separate document: “Common Management Interface Specification.
