

The ceramic head of the pigtail was burned

Overview

Buy a replacement pigtail that uses a heavier gauge wire or one with a ceramic core. This is causing widespread problems in the auto repair industry with melted headlight connectors. Also got the crimping connectors and then replaced the burnt connector one wire at a time so I wouldn't. Kiln underfired and I opened up the box to find that bottom buss bar had completely fallen off. Presumably because the connection bolts and washers had corroded and snapped. One of them even. In the middle of what you thought was a routine headlight bulb replacement, have you ever unplugged the bulb and found a melted harness (AKA connector)?

Here are the causes, and how you fix the problem. This scenario is something that technicians regularly encounter, whether they're working on an. Both wires inside the headlight are black, so it never occurred to me that you don't want to mix up the wires, so I would simply snip them and then wire them into the new pigtail but yesterday a guy at a parts store said "you can't get those mixed up" You have to make sure that each wire on each.
