

The distribution box is equipped with leakage protection

Overview

The interior is typically equipped with protective devices like fuses, leakage protectors, and surge arresters; control devices like contactors, circuit breakers, load switches, and disconnectors; metering devices like current transformers and energy meters; and compensation. The interior is typically equipped with protective devices like fuses, leakage protectors, and surge arresters; control devices like contactors, circuit breakers, load switches, and disconnectors; metering devices like current transformers and energy meters; and compensation. The low-voltage distribution box supports surface-mounted/flush-mounted installation, offering high safety performance. It integrates functions such as overload protection, short-circuit protection, leakage protection, metering, and intelligent control. Can CHINT's Final Distribution Boxes be customized to fit specific needs?

Yes, CHINT. Leakage protection device, also known as leakage protector, refers to a device that can automatically disconnect the circuit or send out an alarm signal when the leakage current in the protected circuit reaches a predetermined value under certain conditions.
