

The function of power cabinet outdoor unit cabinet

Overview

Outdoor electrical enclosures cabinets keep electrical parts safe from harm. They protect equipment from rain, dust, and temperature shifts. Our outdoor cabinets, made of double-walled aluminum profiles, have been specially developed to reliably protect. In essence, the main function of an electrical cabinet enclosure is to protect energized devices like breakers, relays, and control wiring. However, in the outdoor setting, the function assumes prominence. A properly specified enclosure must protect internal equipment against rain, snow, wind-blown. An outdoor cabinet is more than a storage unit; it's a technological innovation designed to house and protect energy systems in outdoor settings. The eMIMO architecture supports multiple input (grid, PV, genset) and output (12/24/48/57 V DC, 24/36/220 V AC) modes, integrating multiple energy sources into one.
