

Total length of global optical fiber cable lines

Overview

The total installed fiber optic cable length worldwide reached 1.2 trillion kilometers by the end of 2023. The U.S. has the most installed fiber optic cable length, at 250 million kilometers, as of 2023. Fibre-optic Link Around the Globe (FLAG) is a 28,000-kilometre-long (17,398 mi; 15,119 nmi) fibre optic mostly-submarine communications cable that connects the United Kingdom, Japan, India, and many places in between. Use the controls at the top to play the animation or step through year by year. Without them, seamless international. This extensive network of cables – which could stretch around the Equator 30 times – is the connective tissue that binds the internet, and thanks to our insatiable appetite for video streaming, it's growing larger with every passing year.
