

Transmission distance of multimode fiber optic patch cord

Overview

These multimode fiber patch cables typically support distances up to approximately 150 meters, depending on the OM grade and the data rate in use. This characteristic makes MMF ideal for high-bandwidth applications over relatively short distances. Due to significant modal dispersion. Before diving into detailed technical comparisons, the five most critical differences between single mode fiber patch cords and multimode fiber patch cords can be summarized as follows: Difference 1: Transmission Distance — How Far Should a Fiber Patch Cord Reach?

Single mode fiber patch cords are. Multimode (OM3/OM4/OM5): With its larger core diameter, multimode fiber is designed for shorter-reach applications. It is typically used with lower-cost VCSEL-based transceivers.
