

Tunnel Mobile Power Distribution Box

Overview

The TAP boxes (Tunnel Application Power) from Phoenix Contact have been specially developed for safe, fireproof, and simple power distribution in tunnels. Power supply and distribution in a tunnel Tunnels are home to a variety of applications that need to be supplied with power in a high-availability configuration. Particularly critical subsections, such as ventilation and lighting, must continue to work even in emergency situations, for example. Trains race through tunnels at speeds up to 300 km/h (200 mph). The systems installed there have to withstand extreme, fluctuating aerodynamic pressures, posing enormous technical challenges. WE-POWER developed the TDLB to withstand harsh conditions in accordance with BS6164, which provides useful guidance on. This can be the result of obvious problems associated with the presence of brackish water and very high levels of dust, or it can be the less predictable abuse that occurs during processes such as shotcreting or when miners carve out crossovers from hard rock deep underground using roadheaders and. Portable Power Distribution by INDU-ELECTRIC provides a dependable solution for safe, flexible, and high-performance temporary power in changing environments. The housing's edges protrude by 50 to 80 mm to protect.
