

Unit wiring is a type of busbar wiring

Overview

Electrical busbar systems (sometimes simply referred to as busbar systems) are a modular approach to electrical wiring, where instead of a standard cable wiring to every single electrical device, the electrical devices are mounted onto an adapter which is directly fitted to a current carrying busbar. This modular approach is used in distribution boards, automation panels and other kinds of i. Content and types of busbar systems

A busbar system usually contains couple of busbar holders, busbars, Adapters to mount devices, clamps either with protective covering or without covering to powerup or distribute the current from the busbar syst. Source:

- Electrically Safe installation up to inside the cabinet,
- Drastically reduce space required inside the cabinet
- Easy trouble shooting in case of switch gear failure.
