

Wavelength of Optical Transceiver Module

Overview

Commonly used wavelengths include 850nm, 1310nm, and 1550nm, as well as the CWDM wavelengths ranging from 1270nm to 1610nm and the DWDM wavelengths ranging from 1525nm to 1565nm or 1570nm to 1610nm. Typically, for short-distance transmissions within 500m, the 850nm wavelength is used. The transmission distance of optical transceiver modules is divided into short distance, medium distance, and long distance. Transmission distances greater than or equal to 30km. Wavelength: The color of light used (e.g. Dictates fiber type (multimode/singlemode) and distance. The wavelength is specified in nanometers (nm). Fiber Type. For single-mode, 1310nm is common in data centers and AI networks, with parallel transmission or CWDM4 (Coarse Wavelength Division Multiplexing) using four wavelengths for higher capacity. Pull-tab colors provide a universal visual indicator that helps: LINK-PP follows widely accepted industry conventions for pull-tab colors to.
