

# What are the blue wires in the cable tray called

## Overview

The blue wire in electrical wiring typically serves as a traveler wire or a secondary function wire, depending on the setup. It's important to understand its role to ensure accurate and safe electrical connections. My cable tester caught every mistake, which made me interested in learning what each wire actually does and why the order is so. The wires in a standard Cat6 cable are blue, blue and white, brown, brown and white, green, green and white, orange, and orange and white. Cat6 cables can transfer data at up to 1 Gbps and up to 250 MHz. Non-Metallic What is Cable Tray Systems?

An electrical cable tray is a type of containment system used to support insulated. The blue wire is more than just a part of the color-coded system—it's a key player in specific electrical setups. Whether you're installing a light switch, a ceiling fan, or other fixtures, identifying the blue wire's function is essential. Keeping Cool (Heat Dissipation): Cables get warm when electricity flows through them.
