

What is the cover plate of the distribution box

Overview

The enclosure of a distribution box is like its outer shell, designed to protect the internal components. It's typically made of either plastic or metal. The choice of material is important because it ensures durability and safety. It ensures that electricity flows. A distribution board (also known as panelboard, circuit breaker panel, breaker panel, circuit breaker, electric panel, fuse box or DB box) is a component of an electricity supply system that divides an electrical power feed into subsidiary circuits while providing a protective fuse or circuit. Distribution boards, often referred to as electrical panels or breaker boxes, serve as the nerve center of any electrical system. In this comprehensive guide, we will explore. North American distribution boards are generally housed in sheet metal enclosures, with the circuit breakers positioned in two columns operable from the front. Some panelboards are provided with a door covering the breaker switch handles, but all are constructed with a dead front; that is to say the front of the enclosure (whether it has a door or not) prevents the operator of the circuit breakers from contacting live electrical parts within. Busbars carry the current from incoming line (hot) conductors to the breakers
