

What to do if the core switch cannot find monitoring data

Overview

Make sure that the switch is running the latest supported firmware and that a compatible reference configuration file (RCF) has been applied. More information is available on the NetApp Support Downloads page. If DOM is critical, then upgrade the firmware of the switch/stack and see if it improves things. I am curious about. Hello everyone, I Cannot monitor CPU and memory information in Cisco switch in Centreon server, it tells me UNKNOWN: Cannot find memory informations, UNKNOWN: Can't find CPU informations, can someone tell me what to do?

I have same issue with regarding Cisco ASA Memory [root@SC01CENTsrv01 ~]#. The Ethernet switch health monitor (CSHM) automatically attempts to monitor the network switches that it discovers; however, monitoring might not happen automatically if the switches are not configured correctly. It is common for people to issue a "show running-config" command to determine whether a Cisco switch is programmed correctly for Livewire, but there are also several other useful. we are facinf and issue with ping from access to core core management vlan 98 192. 0 trunk port enabled for vlan 103 able to ping access switch Access switch management vlan 192.
