

Where should the ground wire of the three-level distribution box be inserted

Overview

Attach a ground wire from one of the threaded studs (A) at the bottom of the housing, to the mounting plate (B). The ground resistance between all system parts shall be < 0 . Power from factory ground must be installed by a qualified electrician. Each DISTRIBUTION BOX and controller must be grounded. This allows for a more balanced distribution of electrical loads, resulting in improved efficiency and reduced power losses. This position is the connection point of the grounding wire in the. • Good system grounding provides the path for normal load and fault currents while maintaining load and controls temporary overvoltage. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1.
