Site selection requirements: The distribution box should be. The Secondary Distribution Box (SDB) receives power from Main Power Distribution box via an extender cable and provides a central power distribution to feed normal branch circuits to the electric floor modules through snap-on extender cables. The SDB can be fitted with terminal blocks for custom. specializes in power system design and engineering, offering solutions for low to high voltage (11kV to 400kV) applications. Our services include HV substation layout design, protection and control engineering, SCADA integration, and detailed electrical network design, all tailored to meet the. □□ Secondary distribution covers energy distribution from substations to customers' meter.
